ANCIENT HISTORY:

Lacus Curtius -

Greek and Roman authors/texts (good for quote sources) –

<http://penelope.uchicago.edu/Thayer/E/Roman/Texts/home.html>

Ancient History (General info) -

<http://www.livius.org/>

Livius - not an academic source, but good for fairly detailed, accurate info

Radiocarbon Web-info -

<https://c14.arch.ox.ac.uk/embed.php?File=calibration.html>

[Reporting radiocarbon dates](#)

Radiocarbon dates should always be reported either as 'percent modern' or years 'before present' (BP). The first indicates the proportion of radiocarbon atoms in the sample as compared to samples modern in 1950. The second is directly derived from this on the assumption that the half-life of radiocarbon is 5568 years and the amount of radiocarbon in the atmosphere has been constant.

The calibrated time scales

Once calibrated a radiocarbon date should be expressed in terms of cal BC, cal AD or cal BP. The cal prefix indicates that the dates are the result of radiocarbon calibration using tree ring data. These values should correspond exactly to normal historical years BC and AD. The term cal BP means the number of years before 1950 and can be directly compared to calendar years.
